Jev OR Decision Model

Fast Slow.

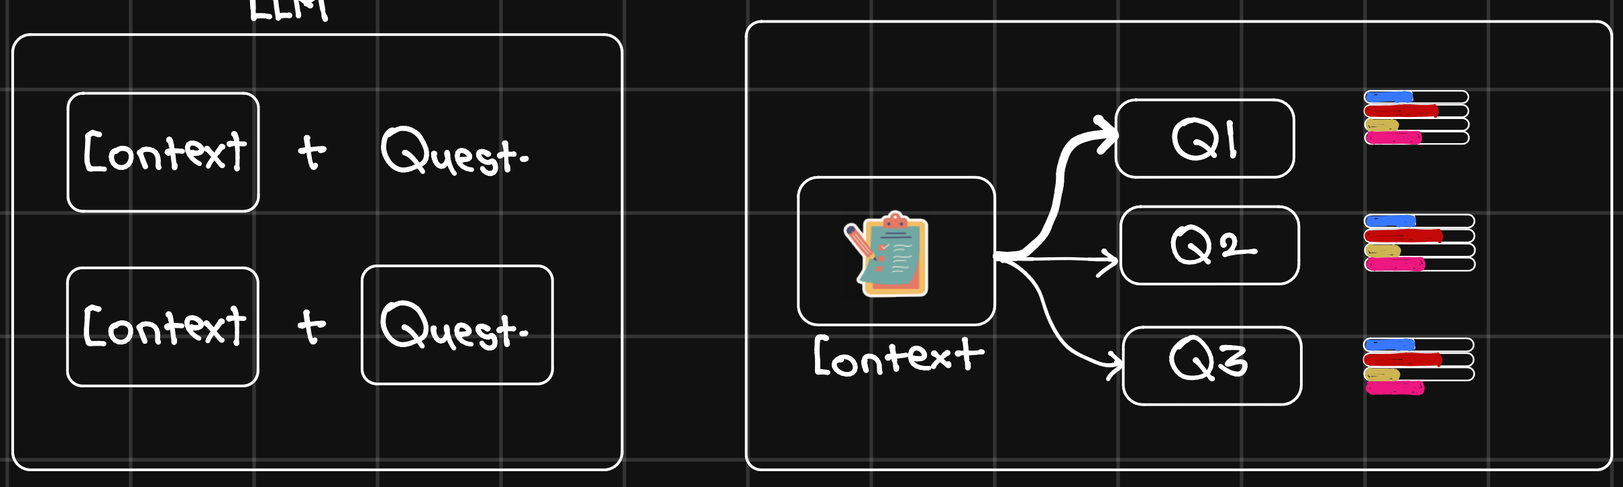

What is Jev ?

LLM → Auto Regressive Token generation Model

Jev → Classifier Model → Not Trained on → Not LLM Decision
(Similar to logistic Reg.) Specific Model Model

Can LLM not do this (Structed decision Model) ?
↳ Yes (but LLM cost↑ Latency↑)

Jev → Pretrained → decision Model → OutPut in Probabilities.
↳ Less cost, Low Latency, Probabilistic cost
↳

Thinking Fast and Slow.
→ System 1 - [Fast] In Automation → Most of the Time
Less Reasoning
Shallow Thinking
Cost↓, Latency↓

→ System 2 - [Slow]
1. Good at Reasoning
2. Cost↑, Latency↑

AI moves from feature to Primitive

AI agent → Which Tool
Which Model
Fast decisive
Low latency
Classification
Unstructured Data → Structured Data

Jev generalised Classifier Model
↓
Classification Service
↓
Fast thinking, Shallow
less cost and Latency

Competitor → Laya.
→ Jev
